INTERNATIONAL PRELIMINARY EXAMINATION REPORT

International application No.

PCT/EP 03/13837

I. Basi	is of the	e report
---------	-----------	----------

1. With regard to the **elements** of the international application (Replacement sheets which have been furnished to the receiving Office in response to an invitation under Article 14 are referred to in this report as "originally filed" and are not annexed to this report since they do not contain amendments (Rules 70.16 and 70.17)):

	Des	cription, Pages	
	1-10)	as originally filed
	Clai	ms, Numbers	
	1-8		received on 28.10.2004 with letter of 22.10.2004
	Dra	wings, Sheets	
	1/2-	2/2	as originally filed
2.	With lang	n regard to the langua juage in which the into	age, all the elements marked above were available or furnished to this Authority in the ernational application was filed, unless otherwise indicated under this item.
	The	se elements were ava	ailable or furnished to this Authority in the following language: , which is:
		the language of a tra	inslation furnished for the purposes of the international search (under Rule 23.1(b)).
		the language of publ	ication of the international application (under Rule 48.3(b)).
		the language of a tra Rule 55.2 and/or 55.3	nslation furnished for the purposes of international preliminary examination (under 3).
3.	Witl inte	n regard to any nucle rnational preliminary e	otide and/or amino acid sequence disclosed in the international application, the examination was carried out on the basis of the sequence listing:
		contained in the inte	rnational application in written form.
		filed together with the	e international application in computer readable form.
		furnished subsequer	ntly to this Authority in written form.
		furnished subsequer	ntly to this Authority in computer readable form.
		The statement that the international a	he subsequently furnished written sequence listing does not go beyond the disclosure pplication as filed has been furnished.
		The statement that the listing has been furn	he information recorded in computer readable form is identical to the written sequence ished.
4.	The	e amendments have r	esulted in the cancellation of:
		the description,	pages:
		the claims,	Nos.:
		the drawings,	sheets:

INTERNATIONAL PRELIMINARY EXAMINATION REPORT

International application No.

PCT/EP 03/13837

5. This report has been established as if (some of) the amendments had not been made, since they have been considered to go beyond the disclosure as filed (Rule 70.2(c)).

(Any replacement sheet containing such amendments must be referred to under item 1 and annexed to this report.)

6. Additional observations, if necessary:

V. Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

1. Statement

Novelty (N) Yes: Claims 1-8

No: Claims

Inventive step (IS) Yes: Claims 1-8

No: Claims

Industrial applicability (IA) Yes: Claims 1-8

No: Claims

2. Citations and explanations

see separate sheet

Re Item V

Reasoned statement with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

Reference is made to the following documents:

D1: EP-A-0 986 057 (SEIKO INSTR INC) 15 March 2000 (2000-03-15)

D2: US 2001/026422 A1 (NISHIMOTO HIDEKI) 4 October 2001 (2001-10-04)

D3: EP-A-0 501 477 (SHARP KK) 2 September 1992 (1992-09-02)

D4: US-A-5 508 857 (HORITA MASAMI) 16 April 1996 (1996-04-16)

The documents D1 - D4 describe a slider-loading mechanism according to the preamble of claim 1.

Different solutions for activating the lever are shown, e.g. a magnetic swing (D4), a spring loaded lever (D2) or other mechanical swinging (D3); D1 does not describe a specific lever realization.

The present application seeks to realize an alternative lever mechanism.

This is performed by a lever actuated via a gear mechanism which is driven by a loading pin when a rack is moved.

No hint can be found in the documents of the SR for this realization. Moreover, this solution seems not to be obvious in view of the general knowledge of the skilled man. Consequently, the present claim 1 as well as the dependent claims are considered to be new and to be based on an inventive step.

Patent Claims

- 1. A slider-loading mechanism for an optical drive, having a slider (2) which is fastened on a resilient arm (6) and is lowered onto the surface of an optical storage medium (8) and/or raised from the surface of the optical storage medium (8), and a loading element (1) separate from the resilient arm (6), the loading element (1) penetrating between the surface of the optical storage medium (8) and the resilient arm (6) and being actuated via a lever (3) for acting on the resilient arm (6) to lower and/or raise the slider (2), characterized in that the lever (3) is actuated via a gear mechanism (5, 7) having a loading pin (7), which is provided with a gearwheel, and a rack (5), which is arranged in a displaceable manner and interacts with the gearwheel of the loading pin (7).
 - 2. The slider-loading mechanism as claimed in claim 1, characterized in that a linear drive is provided for the rack (5).
 - 3. The slider-loading mechanism as claimed in claim 2, characterized in that the gearwheel of the loading pin (7) is actuated by moving the rack (5) relative to the gearwheel with the linear drive.
 - 4. The slider-loading mechanism as claimed in one of claims1 3, characterized in that the gearwheel of the loading pin
 - (7) is actuated by moving the gearwheel relative to the rack
 - (5) using a rough tracking function.
 - 5. The slider-loading mechanism as claimed in one of claims 1 4, characterized in that it further includes displacement stops for the rack (5) for ensuring that the slider (2) is always lowered and/or raised in a reading/writing region of the storage medium (8).

- 6. The slider-loading mechanism as claimed in one of claims 1 5, characterized in that in the lowered position the resilient arm (6) is not in contact with the loading element (1).
- 7. The slider-loading mechanism as claimed in one of claims 1 6, characterized in that it further includes an adjusting means for adjusting the prestressing of the resilient arm (6).
- 8. A unit for reading from and/or writing to optical recording media, characterized in that it has a slider-loading mechanism as claimed in one of claims 1 7.
